

ABSTRACT OF THE DISCLOSURE

5 A glass ceramic sintered body containing gahnite
and cordierite as crystal phases, having a thermal
expansion coefficient at 40 to 400°C of not larger than
5 x 10⁻⁶/°C, a dielectric constant of not larger than 7
and a Young's modulus of not larger than 150 GPa. A
wiring board having an insulating substrate made of
10 the glass ceramic sintered body features very high
reliability in the primary mounting and in the
secondary mounting.
